

## Building a Hybrid RB26 Z

### Part 27 The Exhaust System

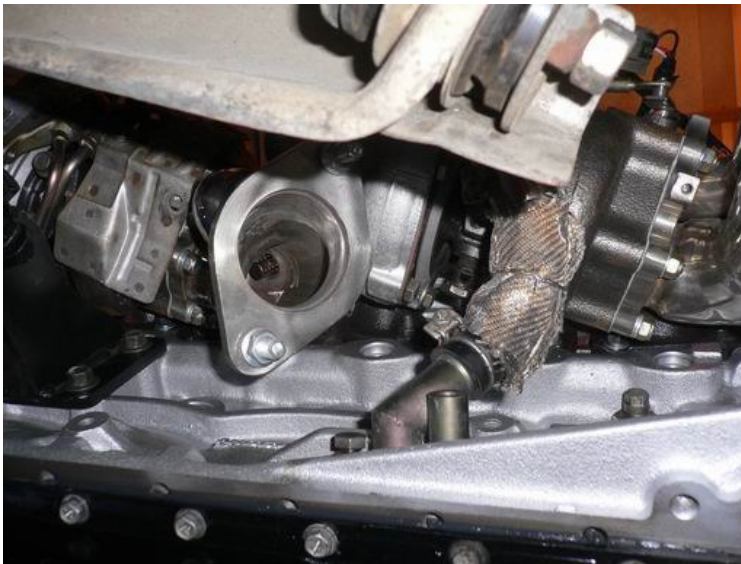

The fitting of the exhaust system was handed to Andy at Andys Exhaust Werx, a very small, unimposing exhaust business in a rather seedy area of Kewdale in Perth. Andy was recommended to me by Steve a fellow Hybridzeder who had had his Z RB25 exhaust done by Andy, and was very impressed with his fabrication skills. I agree with Steve, Andy has done an excellent job, and great value at \$1100 incl GST.

The drop pipes on the rear turbo showing how little clearance there is between them and the firewall. I thought this would be a problem, but no sweat for Andy.

The rear turbo drop pipe from underneath.

The drop pipes on the front turbo which has a bit more room.

The rear drop pipe now joined in to the new exhaust.

The beginnings of the Y junction for the two turbo pipes.

The Y pipe work hooking up to the two drop pipes.
